- The specifications and external appearance of this set are subject to change without prior notice.

Follow the instructions carefully, which will allow the user to optimise the products' performance and give many years of service.

1. No scratch and melting shall be made to covered lead-wires of an a.c. primary circuit including mains leads.
2. No illegibility shall be given to the specification plate, the caution labels, the fuse labels and others.
3. When, on pattern sides of circuit boards, additional repair-parts have been made up, the parts shall be firmly glued to circuit boards or other components, unless the parts can be attached firmly.
4. The following matters shall be maintained as they are, when repairing.
 - 1) Soldering of lead-wire ends
 - * Care should be taken of the space distance in an a.c. primary circuit as well as soldering.
 - 2) Wiring and holding of lead-wires with wire-clips and binders
 - 3) Materials of lead-wires
 - * e.g.; For UL models, lead-wires to be used shall be approved or accepted by the UL.
 - 4) Location of all kinds of insulators
 - 5) Setting of voltage selector switch
 - * Set the Voltage Selector Switch to 240V, 220V, or 120V, According to your Local Voltage.

5. After repaired, the insulation resistance or leakage current shall be measured with $500 \pm 5V$ D.C and shall be not less than $1M\Omega$.

Circuit description

• μ PC1237H Pin description

Pin No.	Pin names	Function
①	Overload detection	Detection of speaker pins short-circuited
②	Middle point potential detection	Relay OFF at approx 0.6 V (BX-110 SP pin ± 2 V) (MX-90 SP pin ± 1.5 V)
③	Auto-return selection	Auto-return when it is grounded, and non-return when it is connected to the capacitor.
④	AC detection	Set relay to OFF when power switch is set to OFF.
⑤	GND	GND
⑥	Relay drive	Drives protection relay.
⑦	Power ON, MUTE	Time constant circuit pin from the timer power ON until the relay is ON.
⑧	Vcc	+B

1-2. Description of pins

Pin No.	Pin names	Function
1, 2	X _T , X _T	Timing oscillator pins.  450kHz
3	C ₁	0 Code input pins.
4	C ₂	1 The code of the transmitter and the cords set by these pins are compared, and the input is accepted when they are the same.
5	C ₃	1
6	FF(DECK)	Continuout signal output pins. This output is kept at "LOW" level while the reception signal is input. 
7	RWD(DECK)	
8	LW(TUNER)	
9	UP(TUNER)	
10	DOWN(TUNER)	
11	FM(TUNER)	
12	MUT SW	The MUTE signal output pin 18 is inverted with the MUTE switch input pin set to "LOW" level.
13	VR UP	D/A converter external control input pins. Pin 13 is the volume UP control pin; the voltage at pin 15 is raised when pin 13 is set to "LOW" level. Pin 14 is the volume DOWN control pin; the voltage at pin 15 drops when pin 14 is set to "LOW" level.
14	VR DOWN	

Pin No.	Pin names	Function												
15	D/A OUT	Volume control voltage output pin. The voltage is output by diving V _{DD} by 32. 												
16	Rx. IN	Reception signal input pin. This pin inputs the command signal with the carrier signal eliminated.

1-3. Description of muting

		MUT OFF	MUT ON
IC6	⑫	HIGH/LOW	HIGH/LOW
IC6	⑱	HIGH (3.5V)	LOW (0V)
IC10	⑯	LOW (0V)	HIGH (9V)

1-3-1. Description of pins and SW2

SW2 ... This is a non-locking switch: pin ⑫ is set to "LOW" level (0V) only when this switch is pressed.

Pin ⑱ ... This is the pin ⑱ control pin and is set to "HIGH" level (5V) in general: pin ⑱ is changed over "HIGH" level → "LOW" level → "HIGH" level → "LOW" level ... every time this pin is set to "LOW" level.

Pin ⑯ ... The inside of pin ⑯ is flip-flop circuit, and is changed "HIGH" level → "LOW" level → "HIGH" level → "LOW" level ... every time pin ⑱ is set to "LOW" level.

1-3-2. Description of MUTE operation

Pin ⑱ is set to "HIGH" level at first (when the AC cord is plugged), and in the MUTE OFF mode. When the MUTE switch is pressed to set pin ⑱ to "LOW" level ($\frac{5V}{0V}$), pin ⑱ is set to the "LOW" level and the unit enters the MUTE ON mode.

When the MUTE switch pressed then, pin ⑱ is set to "HIGH" level and the unit enters the MUTE OFF mode.

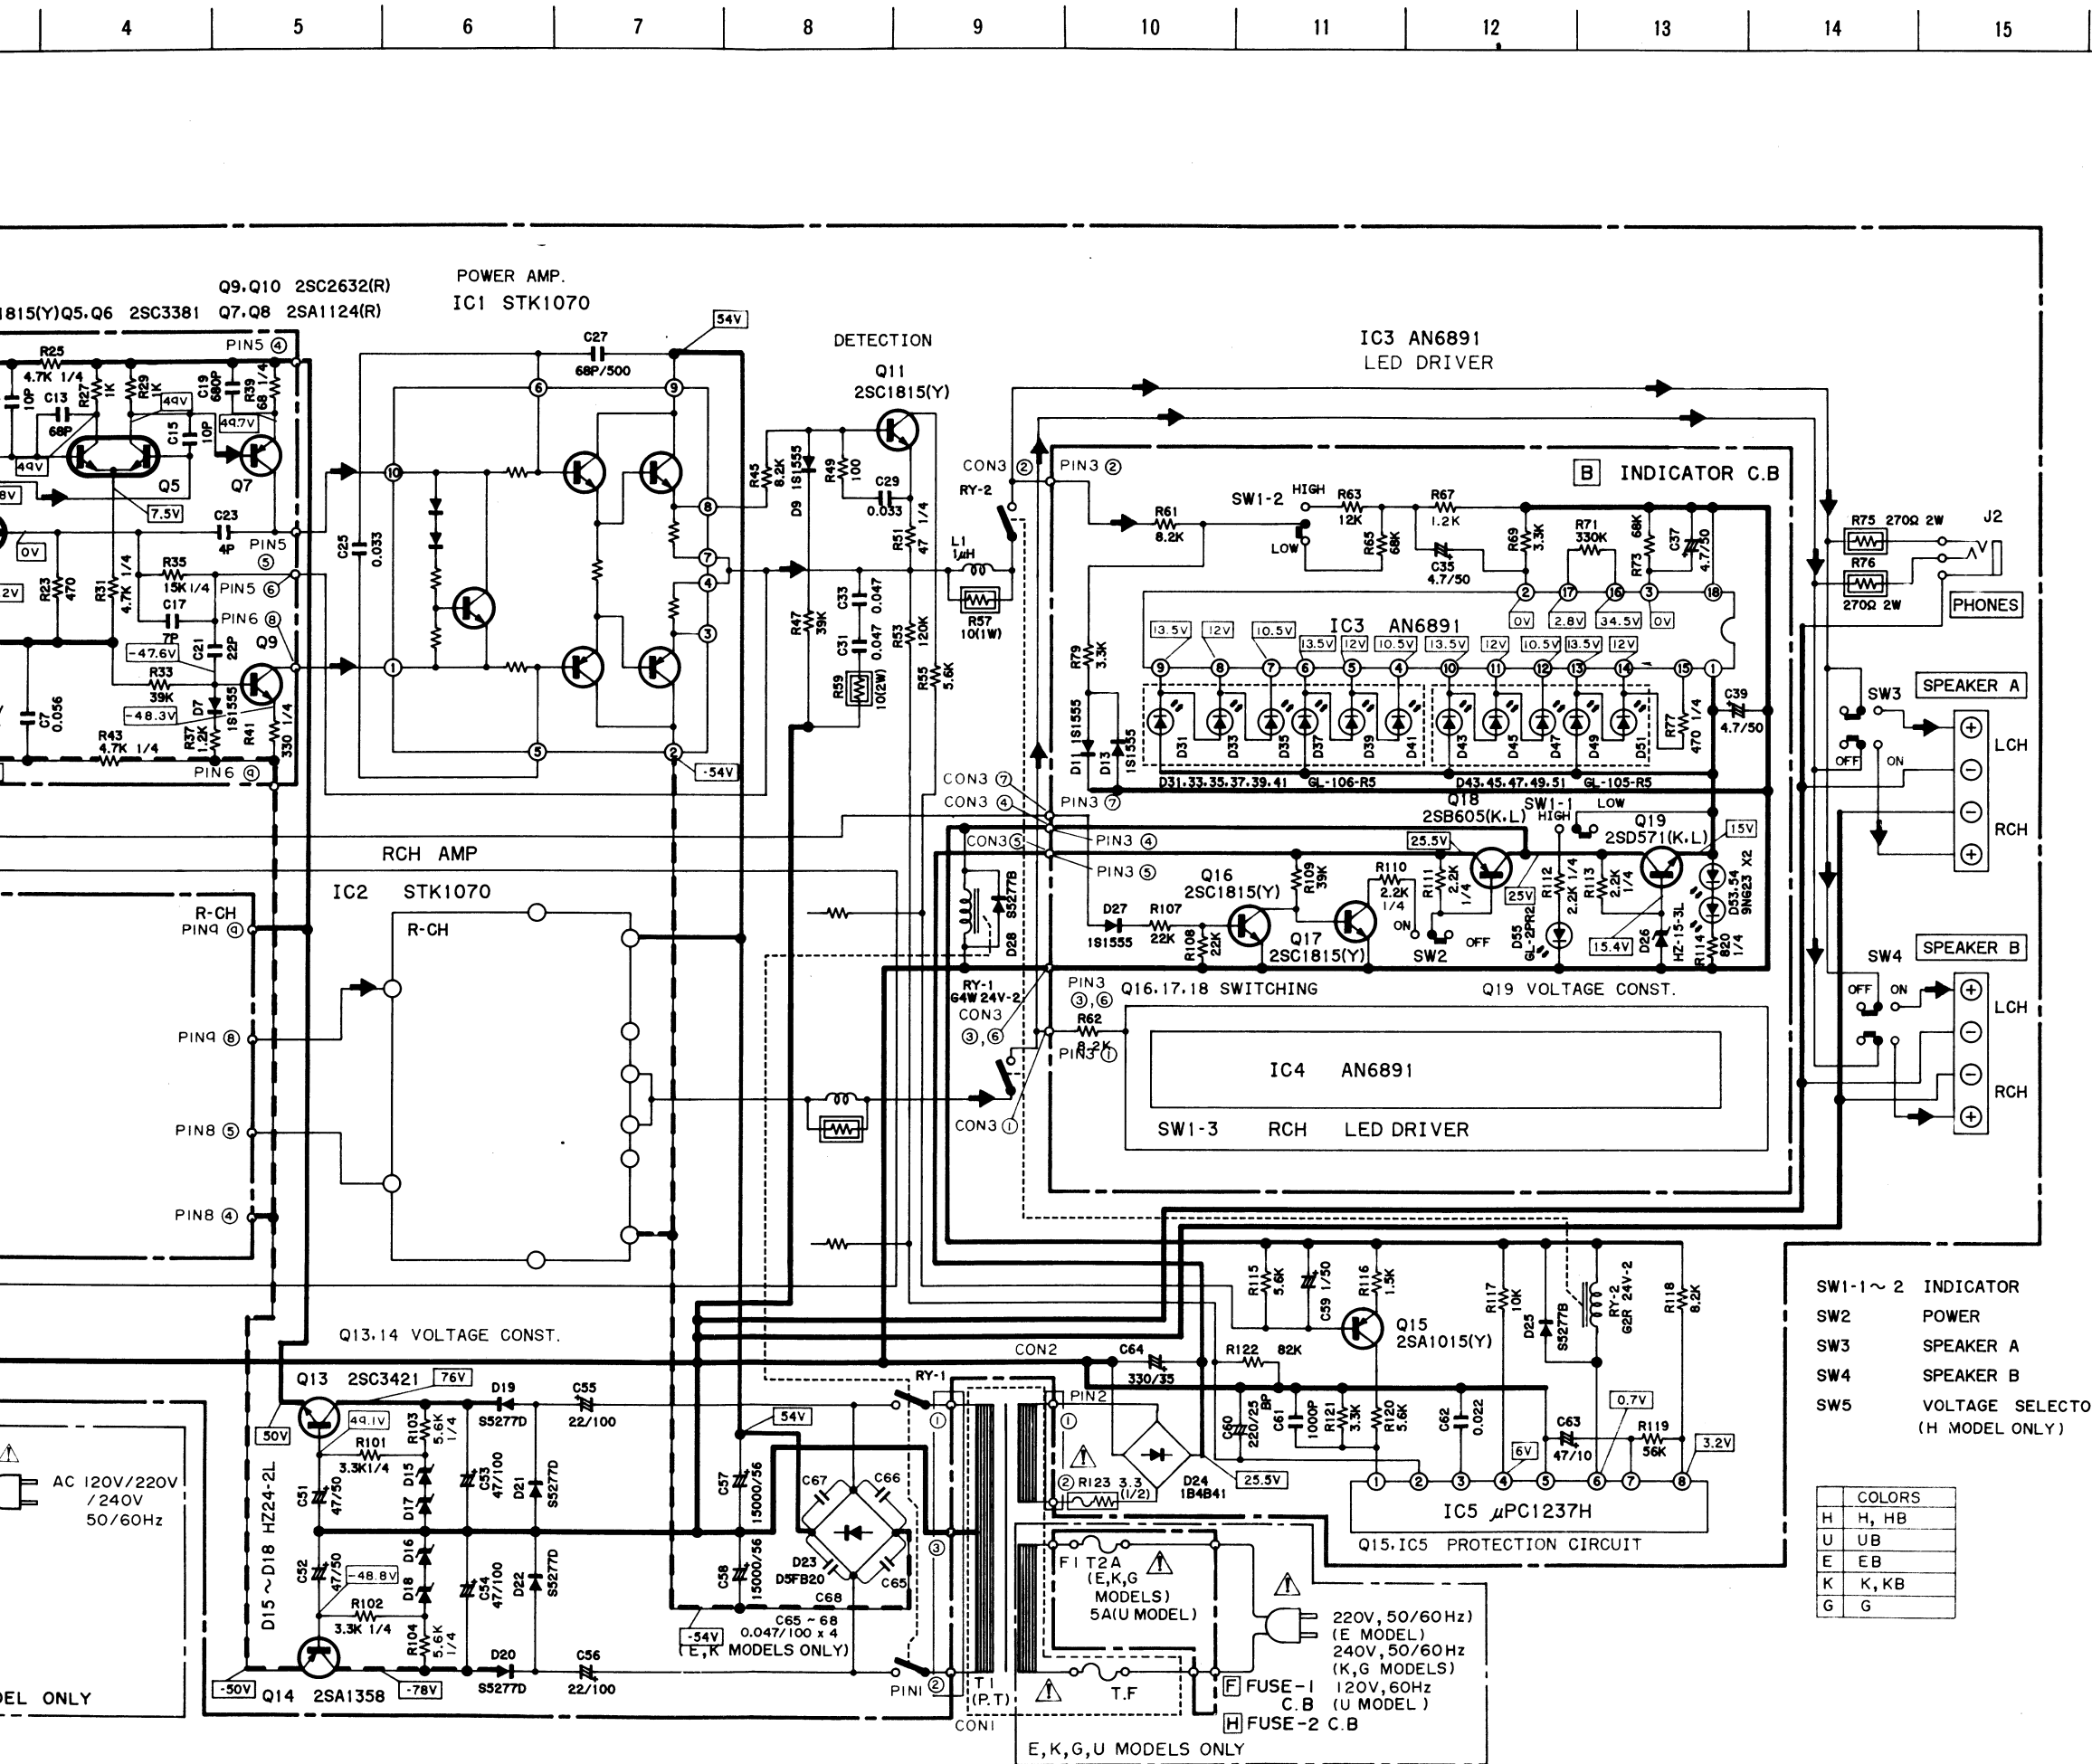

* When the remote control operation is performed, pin ⑱ is set to "HIGH" level and "LOW" level alternately every time the MUTE button is pressed.

1. DC Balance Adjustment

- Settings: • Input signal : No signal.
• Test point : Speaker out.
• Adjustment locations : SFR1 (L-ch)
SFR2 (R-ch)
- Method: Adjust so that the voltage at the test point is
0 ± 30mV.

1. DC Balance Adjustment

Settings:

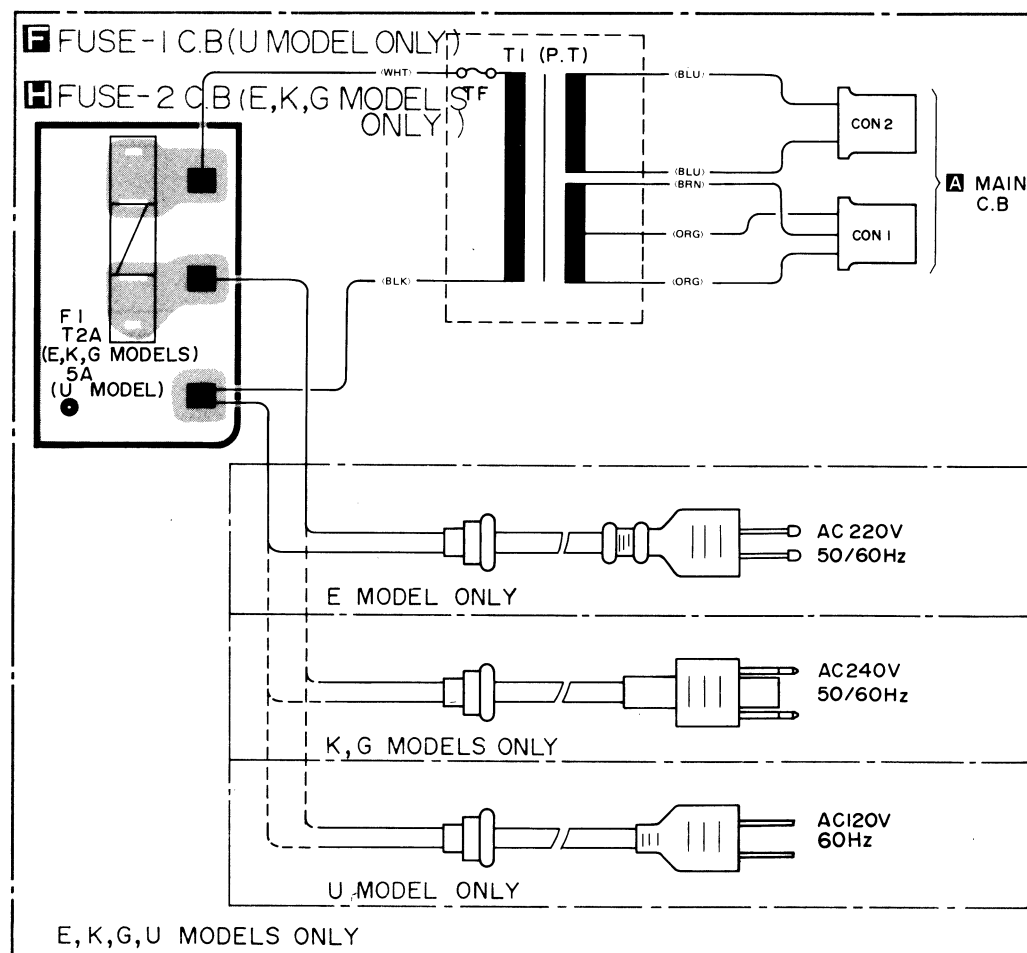

- Input signal : No signal.
- Test point : Speaker out.
- Adjustment locations : SFR1 (L-ch)
SFR2 (R-ch)

Method: Adjust so that the voltage at the test point is $0 \pm 30\text{mV}$.

SCHEMATIC DIAGRAM (MX-90)

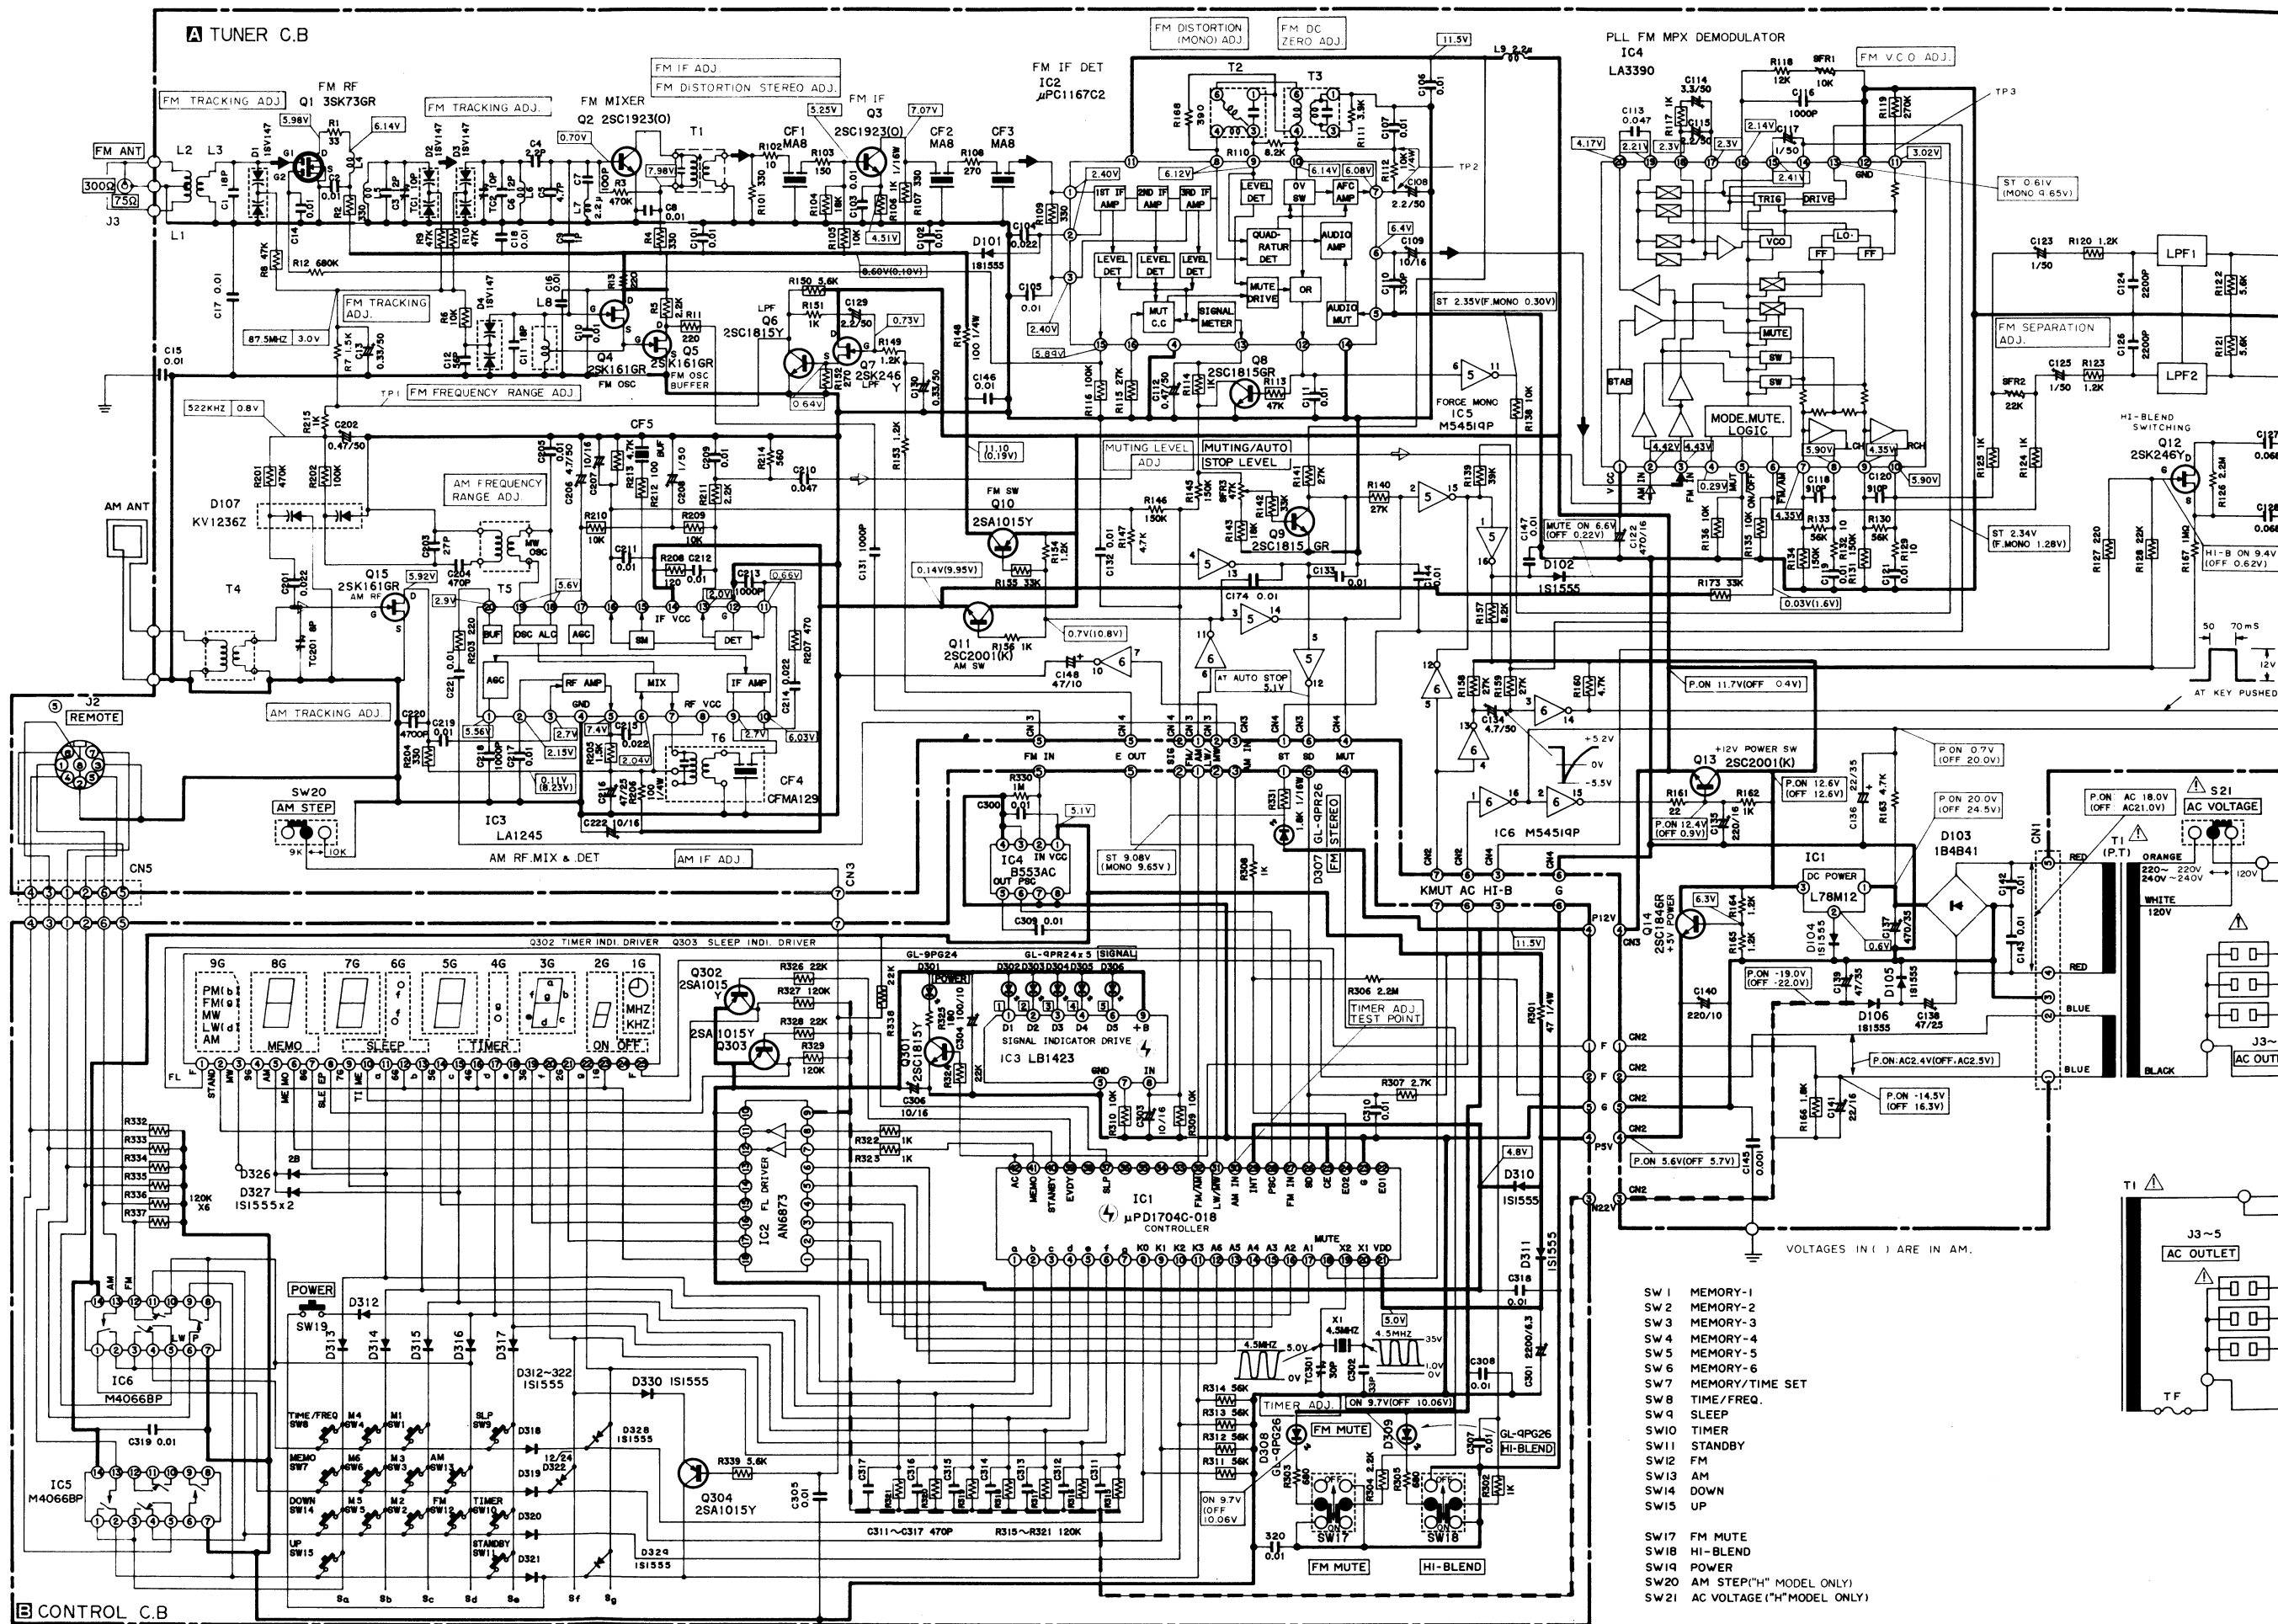

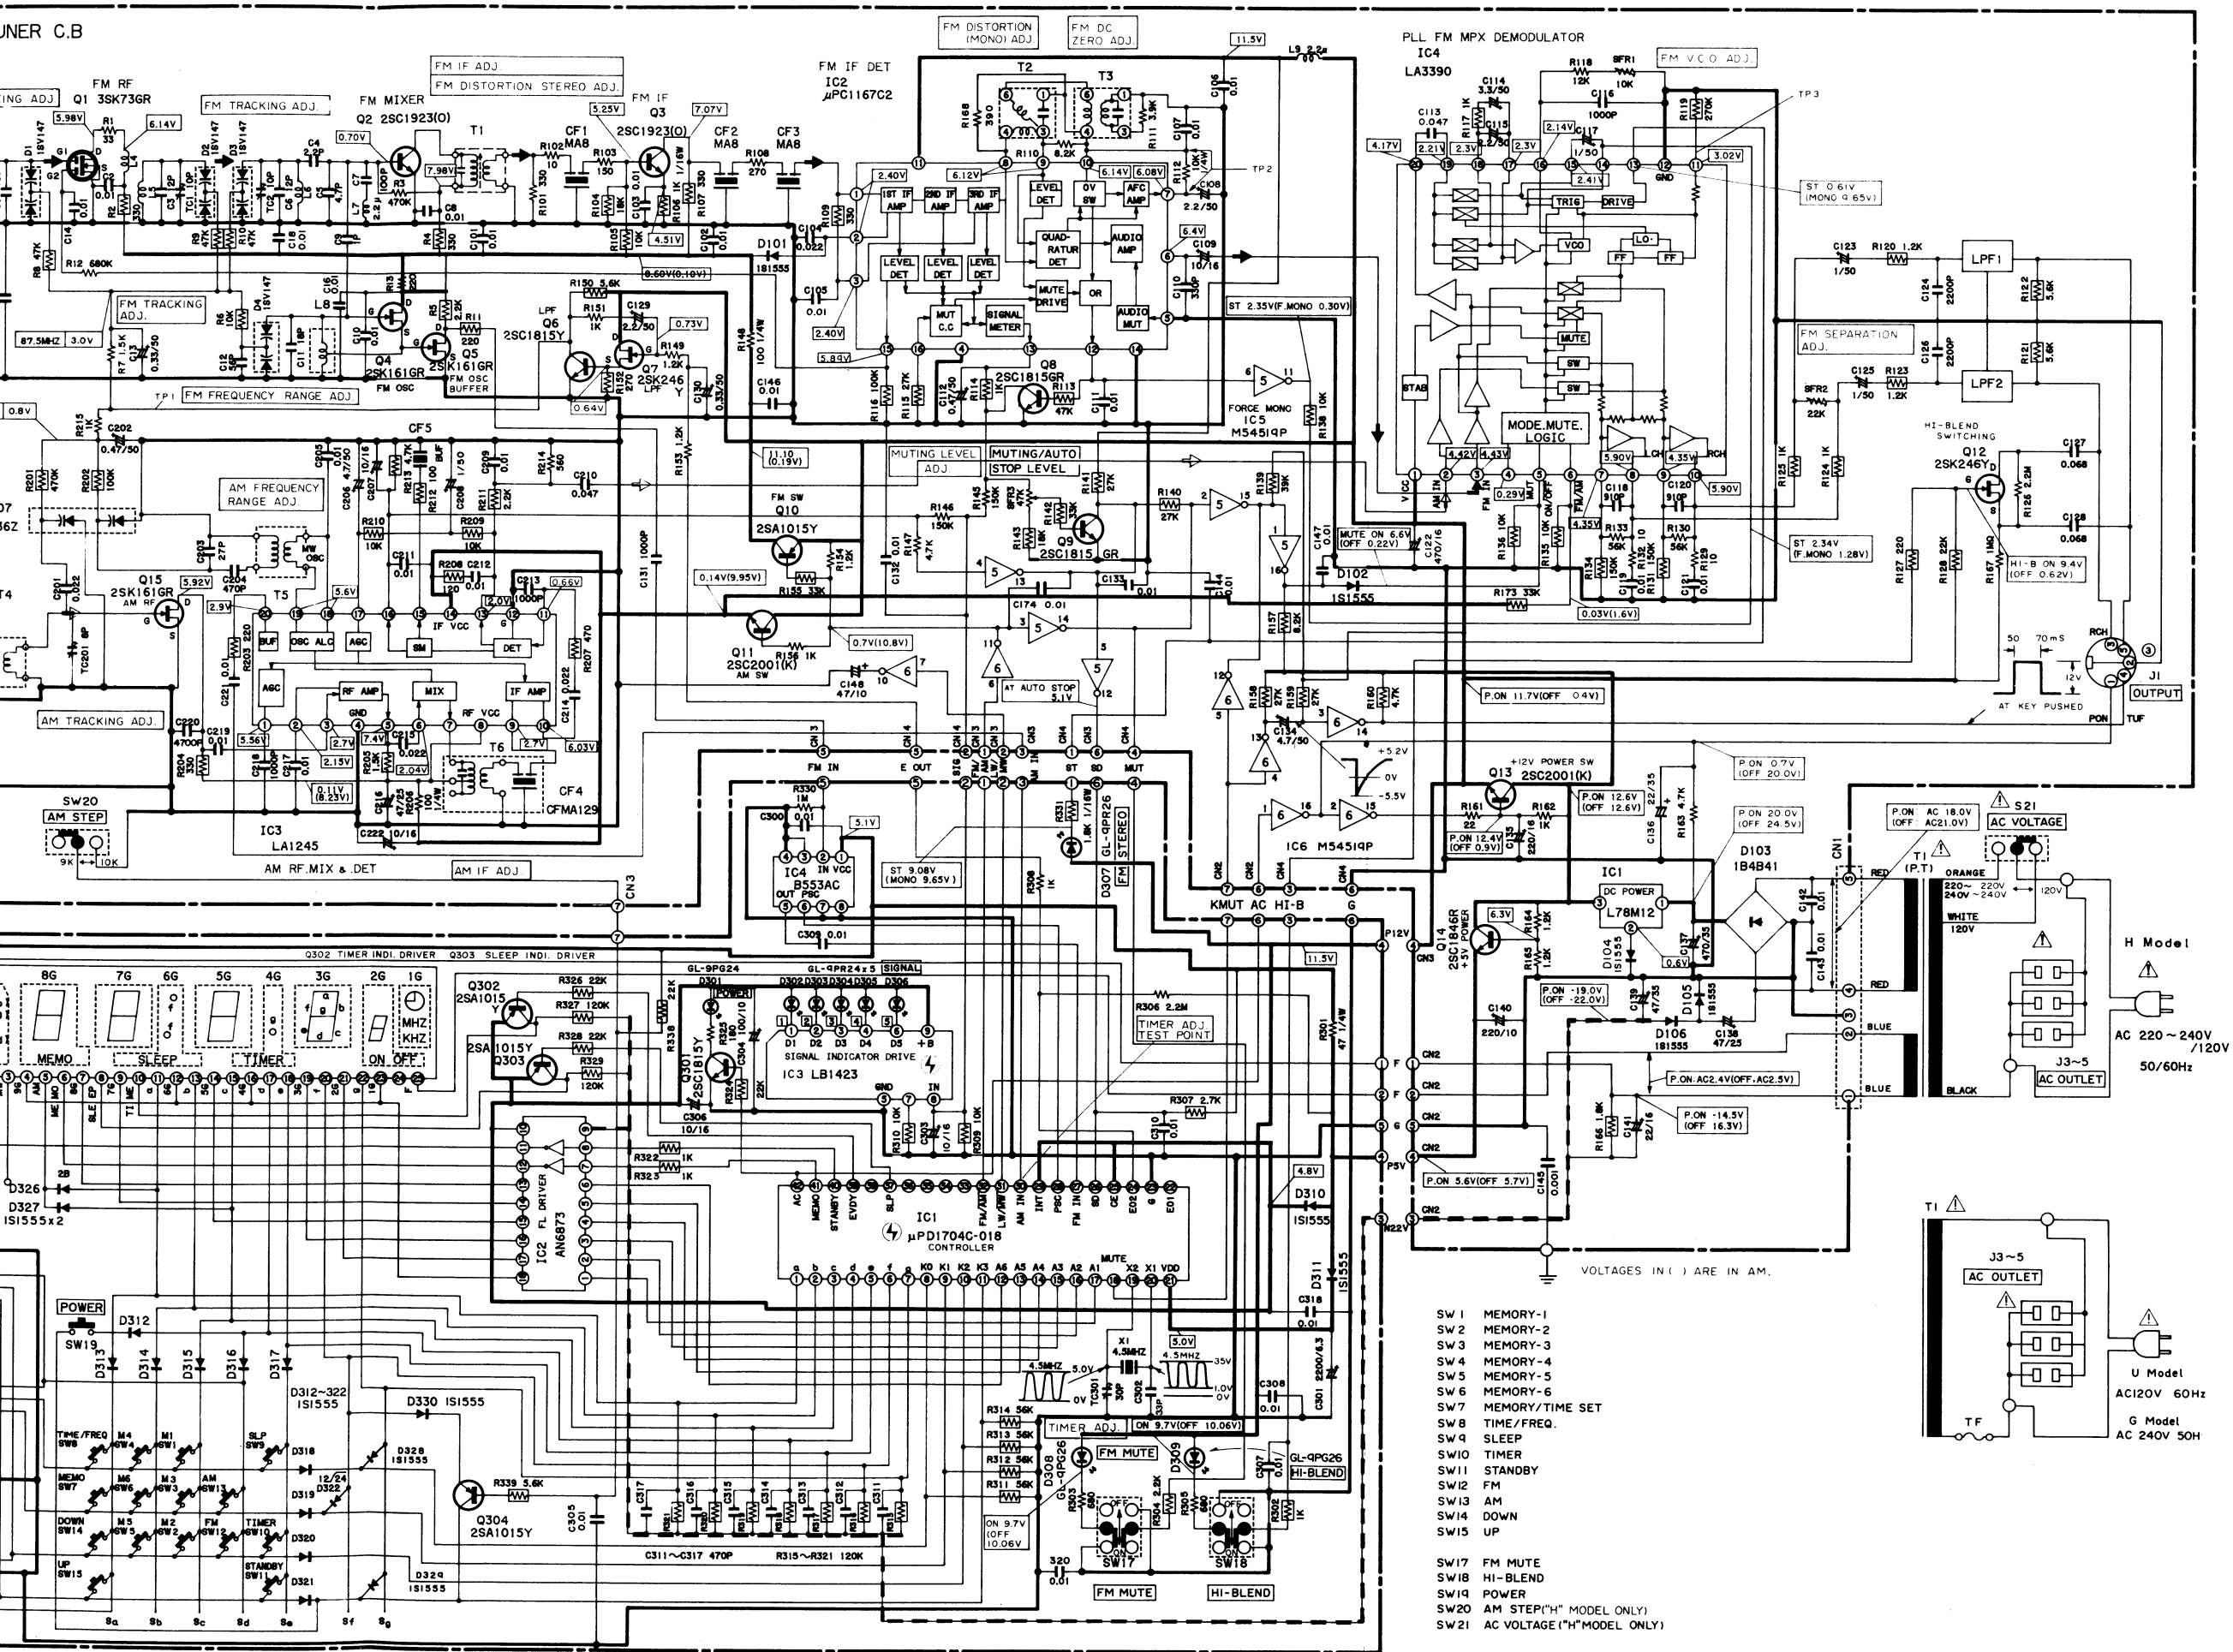

NOTES:

- 1) B (+) power supply ■■■ B (-) power supply
 - 2) ➡ Signal path
 - 3) The voltage is the reference value measured with a tester (20 k-ohms/V DC) when there are no signals. But () is with AM reception or recording.
 - 4) Resistors with no designation have a rated power of 1/4W and a tolerance of ±5%.
 - 5) Capacitors with no designation have a dielectric strength of less than 50WV.
 - 6) The only capacitor tolerance indicated are ±5% (J) and ±10% (K).
 - 7) Ceramic capacitor symbols:
 — For temperature compensation (SL)
 — High dielectric constant system (YY)
 — High dielectric constant system (YW, YP, YZ)
 — Semiconductor ceramic
 — For temperature compensation (SH)
 - 8) Explanation of symbols
 M Mylar capacitor
 A Aluminum solid capacitor
 PP Polypropylene film capacitor
 BP Bi-polarized capacitor
 L Low-leakage capacitor
 T Tantalum capacitor
 S Styrol capacitor
 Printed resistor
 Fuse resistor
 Nonflammable resistor
 Low noise resistor
- ⚠ Safety component symbol
 This symbol is given to important parts which serve to maintain the safety of the product, and which are made to conform to special safety specifications. Therefore, when replacing a component with this symbol, make absolutely sure that you use a designated part.
- This schematic diagram is subject to change without notice in the interests of improved performance.

Safety component symbol

This symbol is given to important parts which serve to maintain the safety of the product, and which are made to conform to special safety specifications. Therefore, when replacing a component with this symbol, make absolutely sure that you use a designated part.

C-MOS IC handling precaution

The C-MOS IC's construction makes this part susceptible to damage by static electricity and so take sufficient care in regard to following articles.

1. Need to be put on conductive sheet, to be put in a metallic box and to be wrapped by aluminium foil for transportation and deposit.
2. To use solder iron less than 40W (less than 260°C) of power consumption for soldering. But do not overheat more than 10 second.
3. Do not perform a conductivity test with a tester, etc. Refer to the circuit voltages of each part.
4. The ICs on the electrical parts which are indicated by an C-MOS IC symbol mark (\oplus).

Safety component symbol

This symbol is given to important parts which serve to maintain the safety of the product, and which are made to conform to special safety specifications. Therefore, when replacing a component with this symbol, make absolutely sure that you use a designated part.

C-MOS IC handling precaution

The C-MOS IC's construction makes this part susceptible to damage by static electricity and so take sufficient care in regard to following articles.

1. Need to be put on conductive sheet, to be put in a metallic box and to be wrapped by aluminium foil for transportation and deposit.
2. To use solder iron less than 40W (less than 260°C) of power consumption for soldering. But do not overheat more than 10 second.
3. Do not perform a conductivity test with a tester, etc. Refer to the circuit voltages of each part.
4. The ICs on the electrical parts which are indicated by an C-MOS IC symbol mark (Ⓢ).

Note: Combination Circuit Board

The parts on the electrical parts list which are indicated by an asterisk (*) are supplied as one single combined circuit board. Therefore, they will not be supplied separately. If this becomes necessary, please order the entire circuit board.

BLOCK DIAGRAM

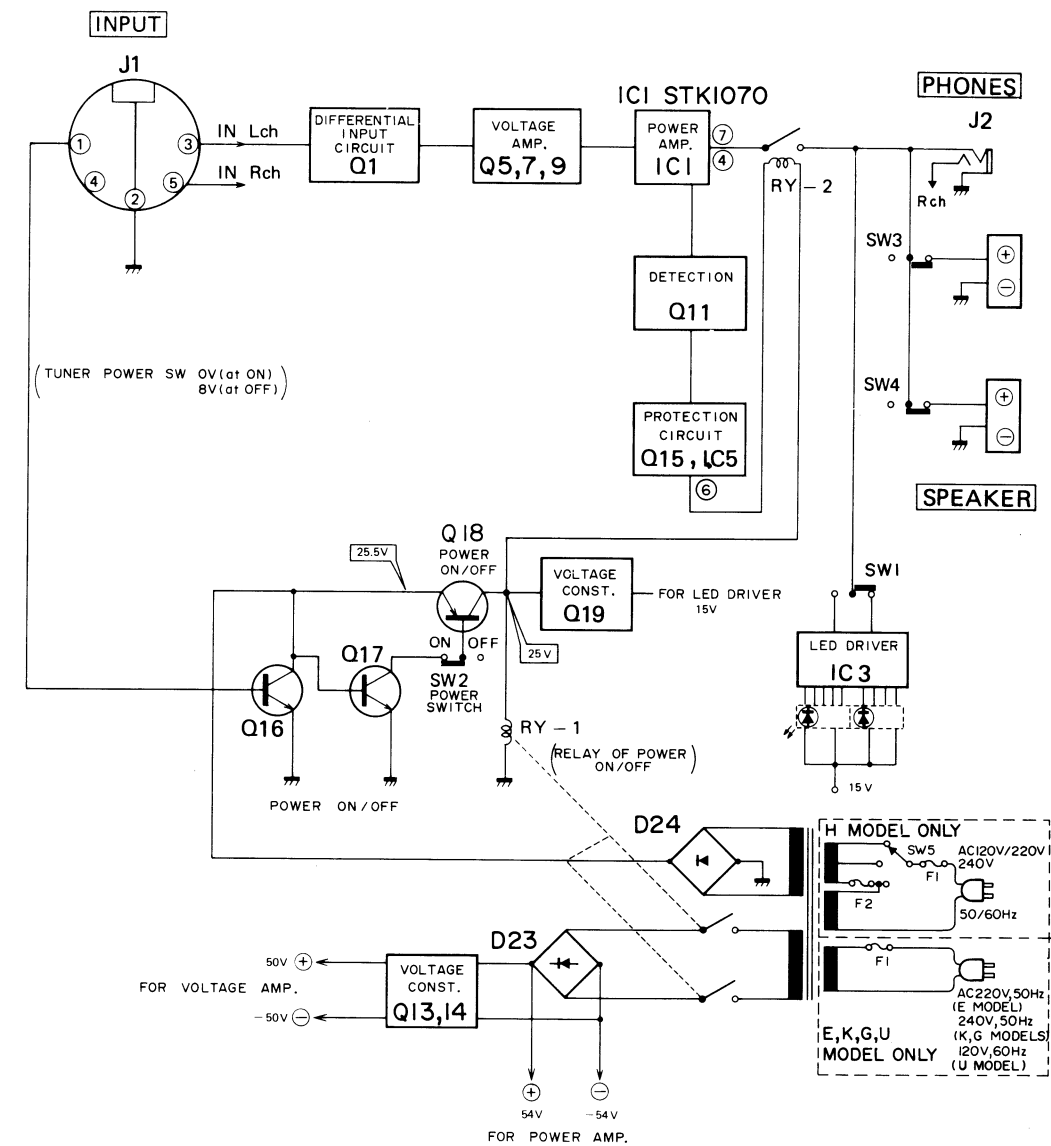

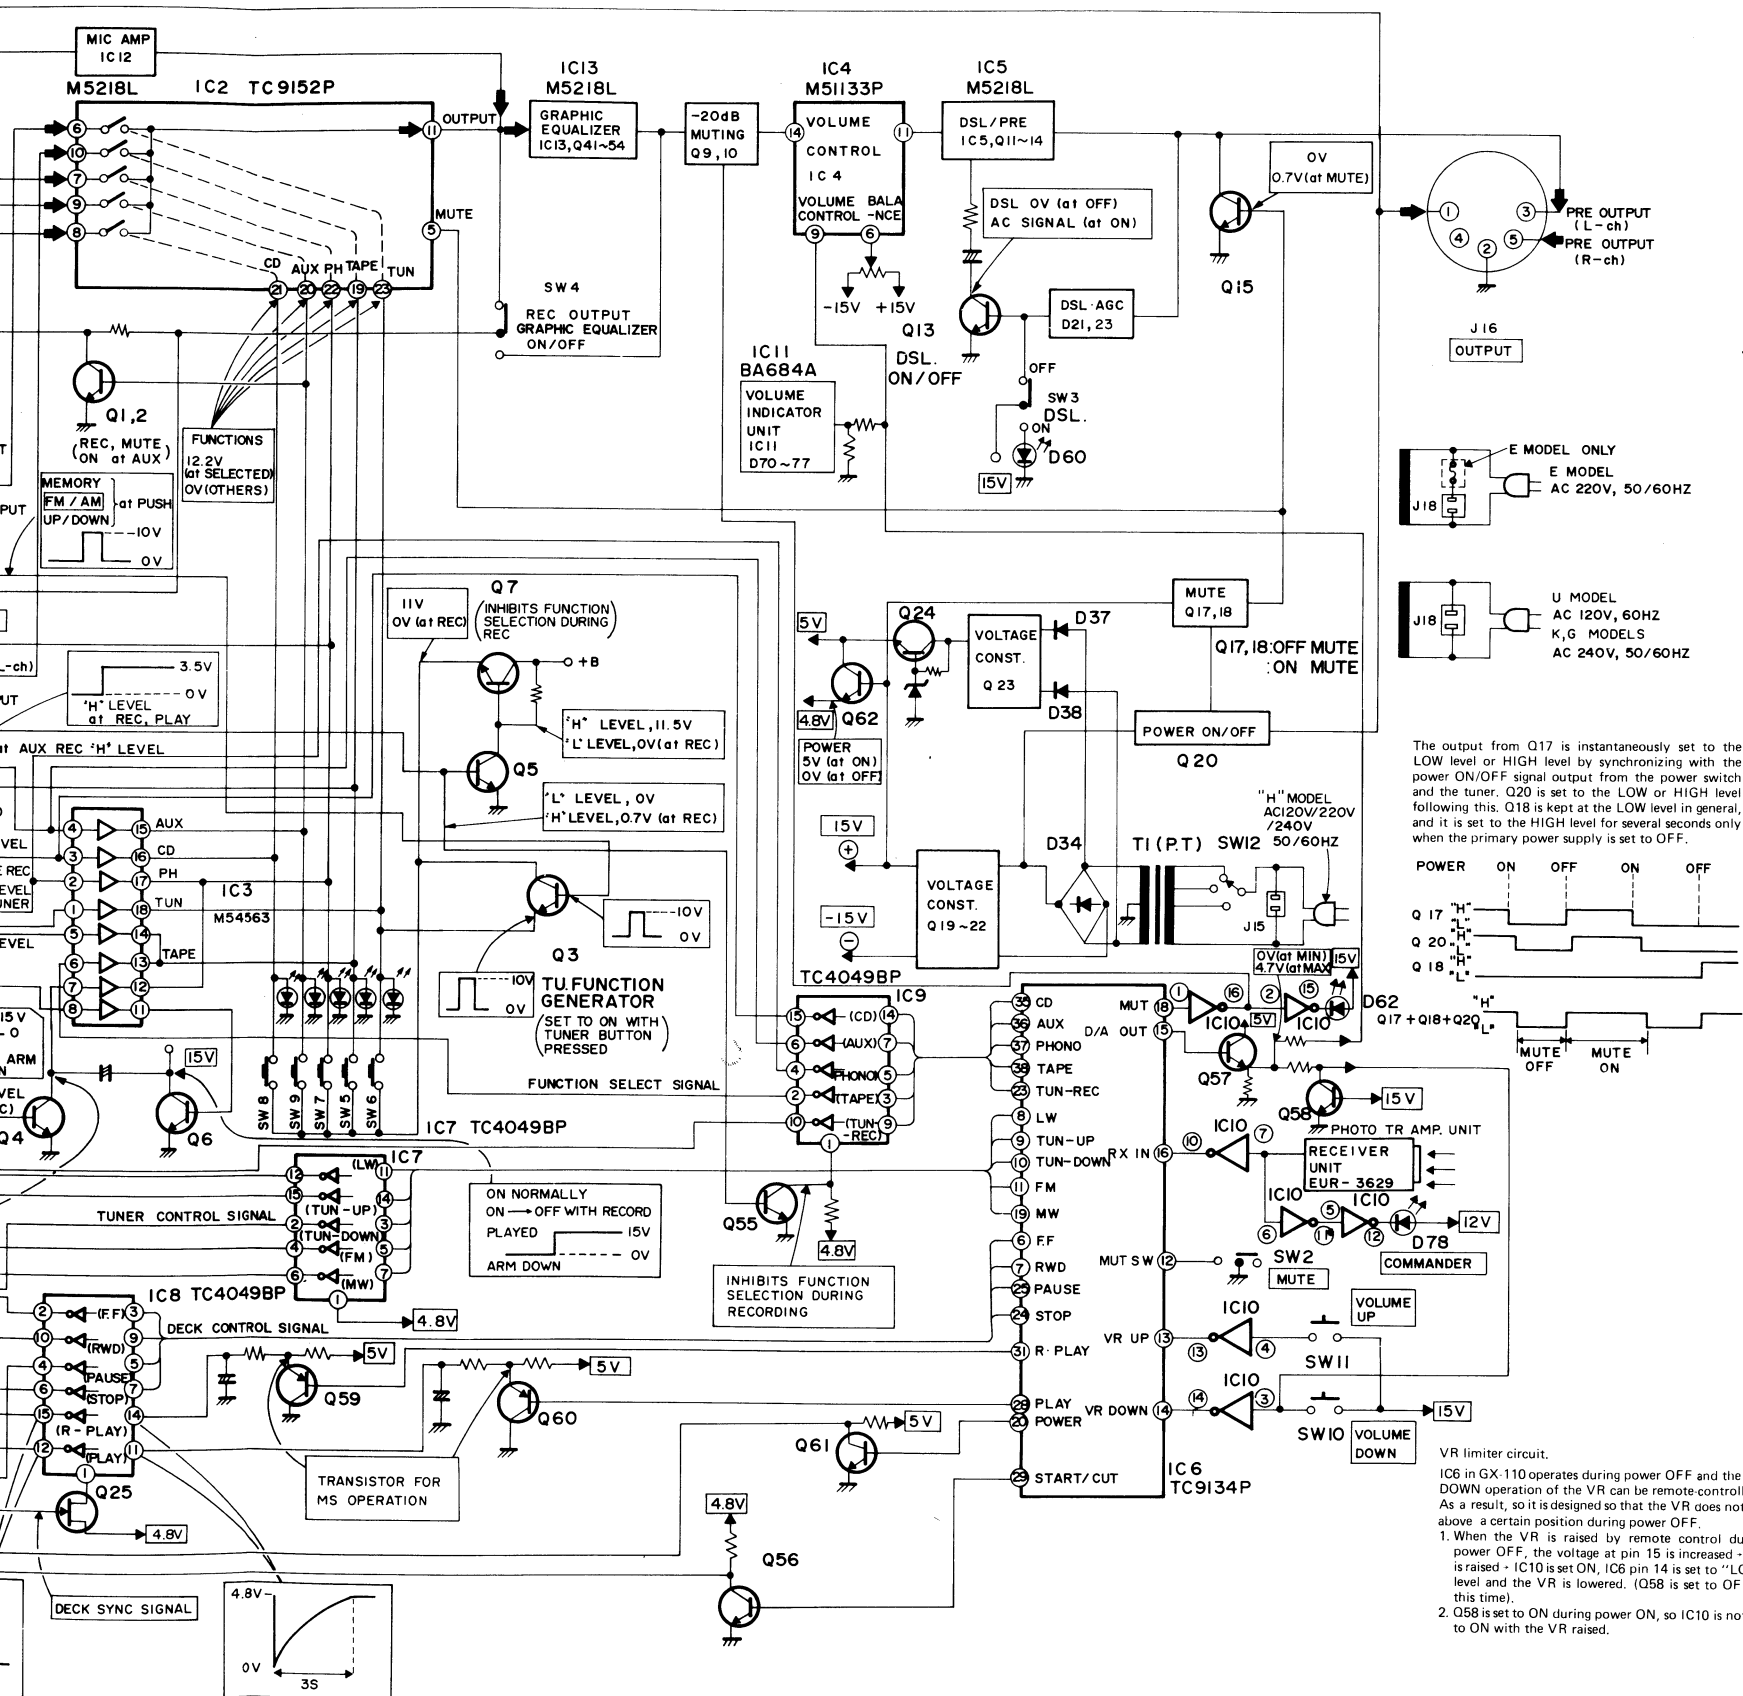

•TX-110

•GX-110

•BX-110

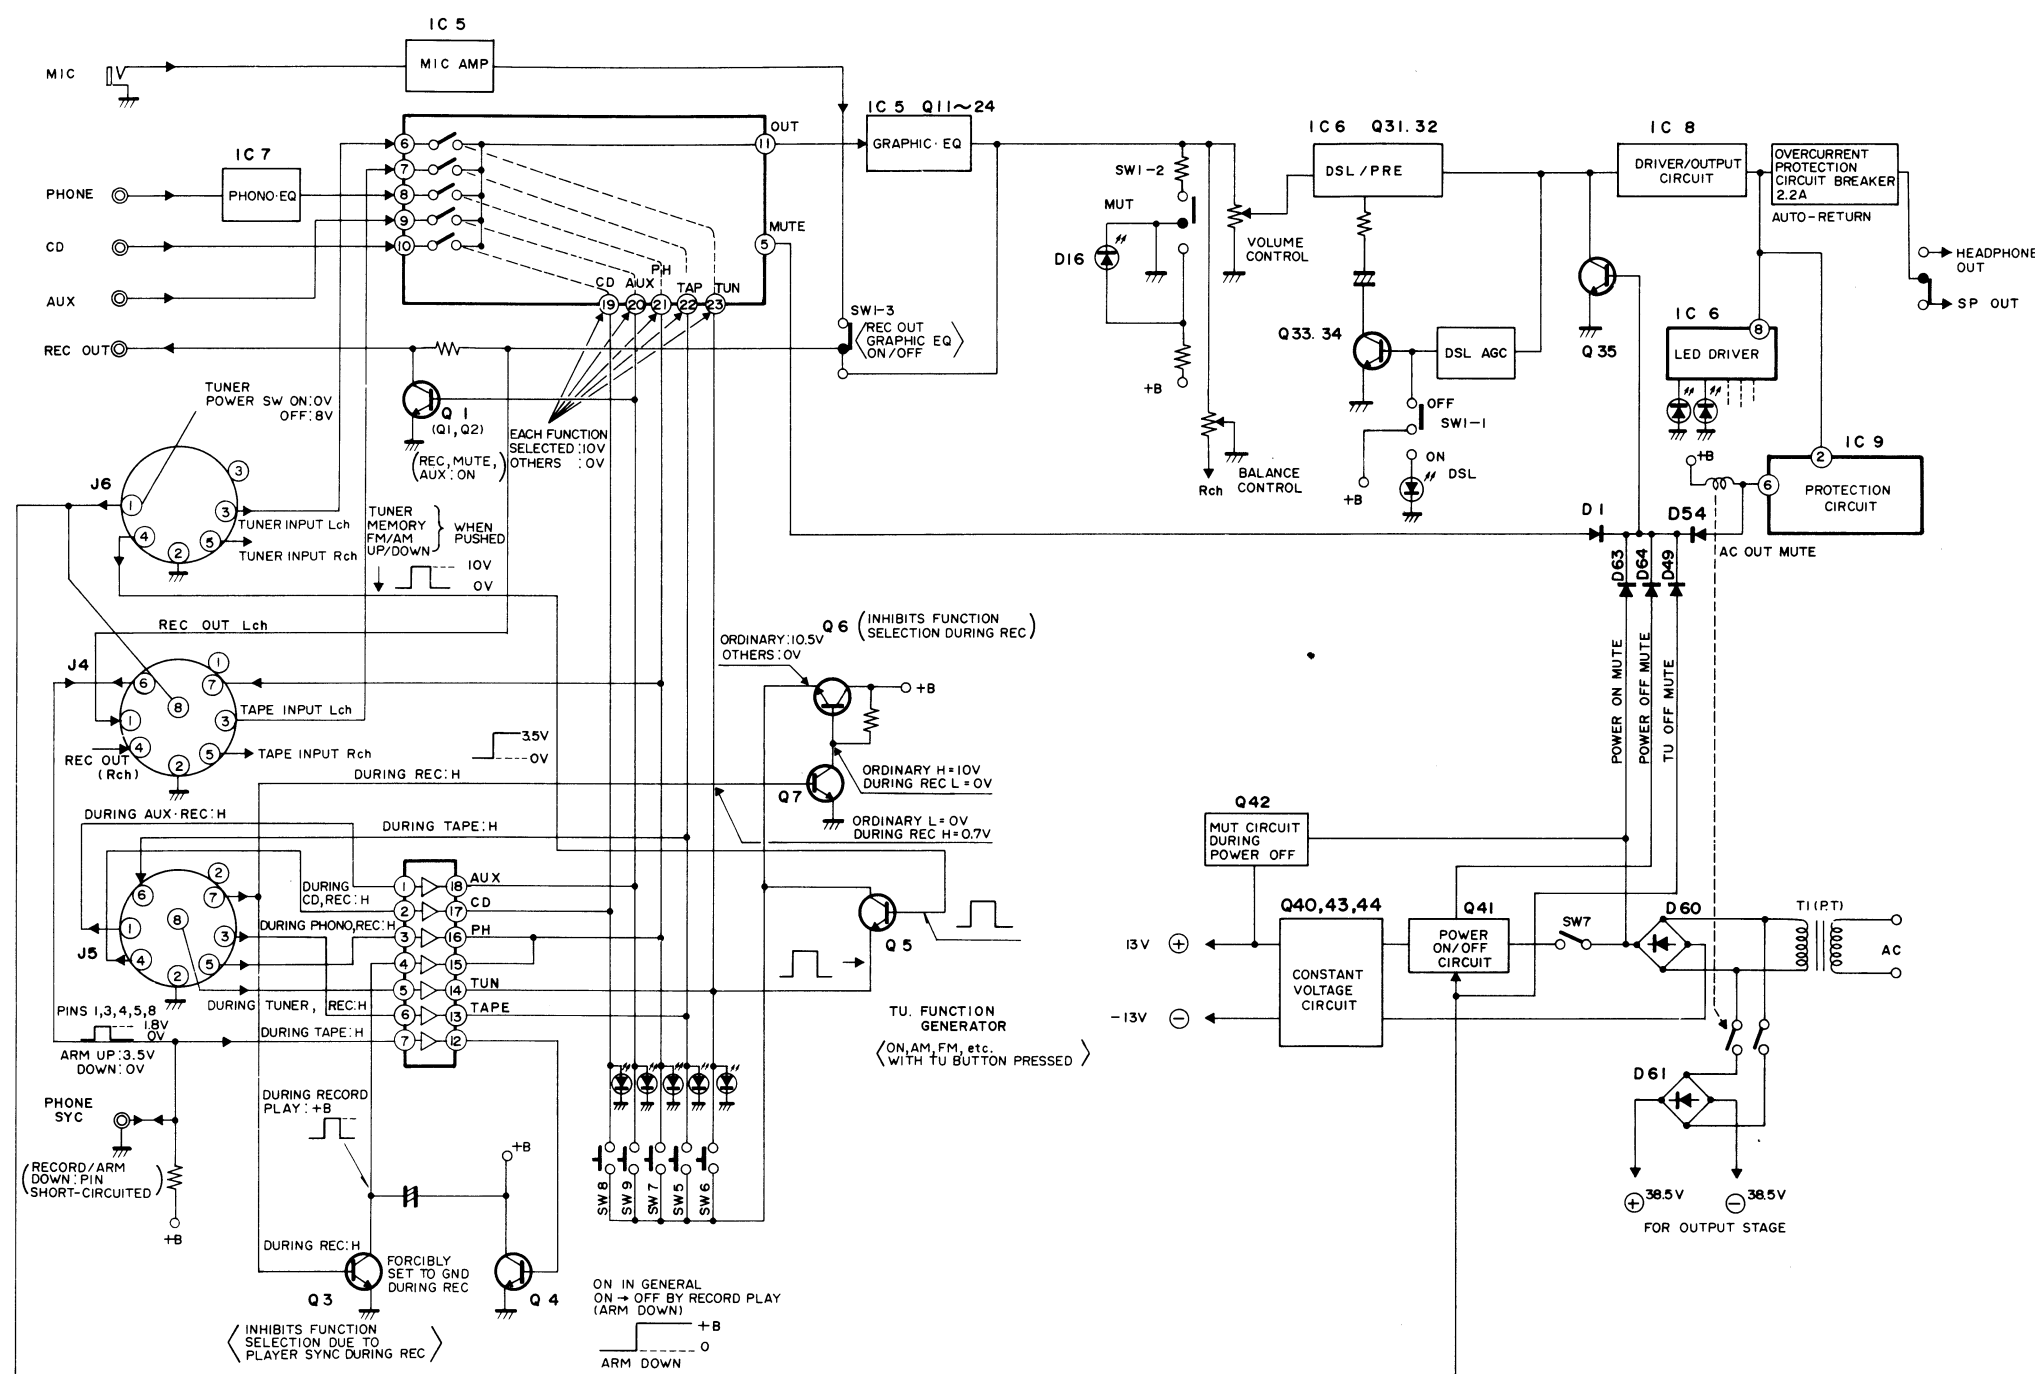

The output from Q17 is instantaneously set to the LOW level or HIGH level by synchronizing with the power ON/OFF signal output from the power switch and the tuner. Q20 is set to the LOW or HIGH level following this. Q18 is kept at the LOW level in general, and it is set to the HIGH level for several seconds only when the primary power supply is set to OFF.

VR limiter circuit.
IC6 in GX-110 operates during power OFF and the UP/DOWN operation of the VR can be remote-controlled. As a result, so it is designed so that the VR does not rise above a certain position during power OFF.
1. When the VR is raised by remote control during power OFF, the voltage at pin 15 is increased - VR is raised - IC10 is set ON, IC6 pin 14 is set to "LOW" level and the VR is lowered. (Q58 is set to OFF at this time).
2. Q58 is set to ON during power ON, so IC10 is not set to ON with the VR raised.

3. FM Tracking Adjustment

L1, 2, 3, 4, 5, 6.....87.5 MHz
TC1, 2.....108.0 MHz
Method:
Apply the input signal of 87.5 MHz, 20 dB
and 108.0 MHz, 20 dB and adjust L1, 2,
3, 4, 5, 6, TC1 & 2 for minimum distortion.

9. Muting Level Adjustment

Settings:
• BAND Switch : FM
• FM MUTE Switch : ON
• Input Signal : 98.0 MHz, 25 dB
• Adjustment Location : SFR3
Method:
Reducing the output of the signal generator to
25 dB, and adjust SFR3 to silence the output.
Rating:
25 dB \pm 3 dB

2. FM Frequency Range Adjustment

Method:
Adjust L8 to obtain a 3.0 V at TP1 and con-
firm the highest frequency is 108.0 MHz.

8. FM Distortion (STEREO) Adjustment

Settings:
• BAND Switch : FM
• FM MUTE Switch : OFF
• Input Signal : 98.0 MHz, 60 dB, L/R
Pilot 10 kHz
• Test Point : TP2
• Adjustment Location : T1
Method:
Adjust T1 for minimum distortion.
Rating:
Less than 0.5%

4. FM DC Zero Adjustment

Settings:
• BAND Switch : FM
• FM MUTE Switch : OFF
• Input Signal : 98.0 MHz, 60 dB
• Test Point : TP2
• Adjustment Location : T2
Method:
Adjust T2 to obtain a 0 \pm 30 mV at TP2.
